# Kofax
Web Capture

Organizations across a wide variety of sectors, including banking, insurance, healthcare and government are looking for ways to provide better services faster, while leveraging and optimizing investments in existing infrastructure and systems.

To help organizations provide superior service, Kofax extends the footprint of information capture beyond the firewall with Kofax Web Capture™. This application enables organizations to create scan and image enabled customer-facing web portals and other web based applications.

For many organizations, the receipt of a document is also the initiation of a process or revenue-generating transaction, or the continuation of processes requiring trailing documents to continue. Kofax Web Capture enables organizations to efficiently capture any content directly where documents are received by leveraging existing corporate web portals or other web-based applications — whether in the central office, remote branches or home offices. Rather than requiring users to bring the content to a centralized capture platform, users can capture and submit information as soon as it is available and feed content through a common set of business rules for document processing, classification, data extraction and purification.

Benefits of Kofax Web Capture

- Minimizes the time to receive process related documents
- Removes cost associated with collecting, preparing and shipping documents to central processing location
- Improves business performance and reduces operational costs
- Helps organizations to be more responsive to customers
- Maintains strong chain of custody
- Improves process visibility and provides beginning-to-end reporting
- Improves data accuracy and reduces error rates
- Improves the customer experience and offers a competitive differentiation

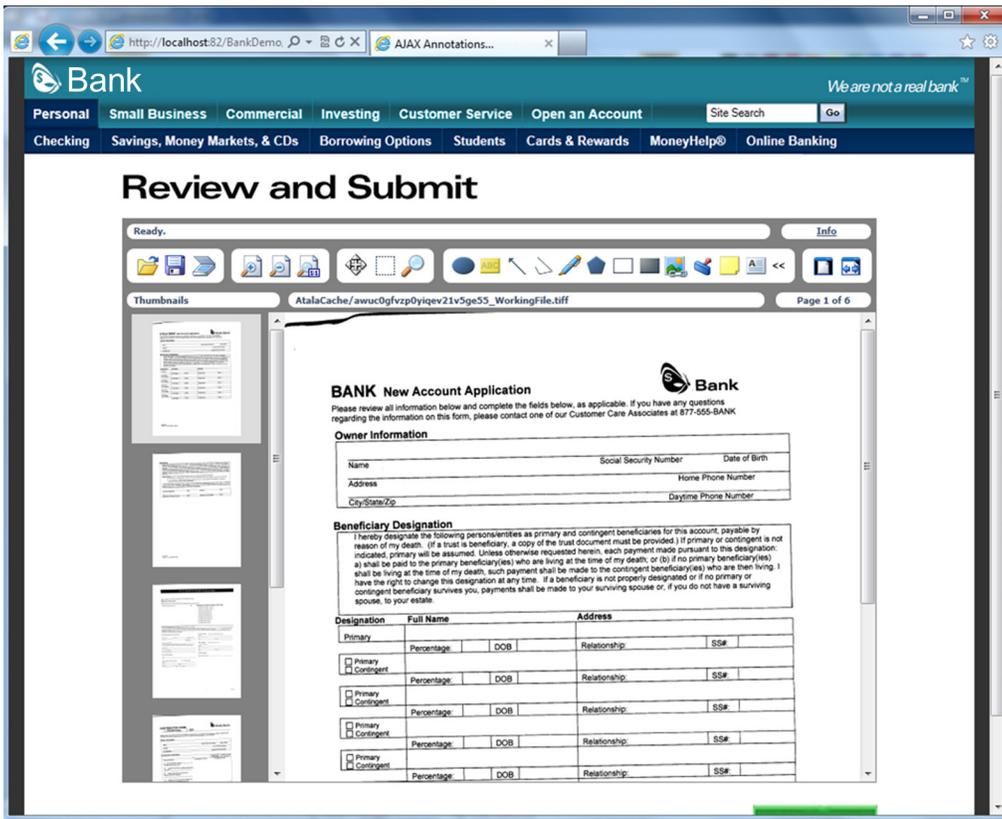

Powerful, Single Platform

Kofax is the only company that offers a single, comprehensive Capture Enabled BPM™ (business process management) platform for capturing information, from any location, in virtually any format or source. With Kofax Web Capture, field representatives in remote branch offices or retail service counter, customers in their home or partners themselves can capture documents using their common web browser and local scanning device to initiate business processes or submit further information at the earliest point in the process. Capturing this information at the 'Point of Origination,' from virtually anywhere, and delivering it to enterprise applications accelerates processes, minimizes latency, speeds transactions and reduces processing costs for better service and an improved customer experience.

Kofax Web Capture is a comprehensive toolkit that scans and image enables any web application or business portal, and tightly integrates the solution with the Kofax's Capture Enabled BPM platform. Process exceptions and requests for trailing documents can be submitted directly by the customer and connected to core business systems and processes.

Kofax Web Capture extends existing infrastructure investments directly to the web portals where content originates that feeds those core applications. Not only is the transaction accelerated, but the effective use of the process is increased as more data is being delivered into the process pipeline.

KOFAX

Kofax Web Capture enables organizations to create scan and image enabled web portals. It allows to scan and upload documents and images. Integrated navigation tools such as the thumbnail view, zoom and rotate allows the user to easily review the content.

Annotations can be placed on the document to provide further information or redact some areas to remove sensitive information.

Market-leading Image Perfection Technology

The challenges associated with using home office scanners or small MFPs to capture documents and data at a level of quality that enables it to drive business processes and workflow are greater when compared to using a high-quality production scanner. If image quality is compromised the downstream effectiveness of classification and extraction is degraded which translates into higher exception and correction costs.

Kofax Web Capture is using Kofax's patented and market leading VRS Elite™ image perfection technology to ensure images taken on any home office scanners are process ready and of the highest quality. Solutions that lack the advanced image processing capabilities of VRS are forced to rely on costly manual processes to correct recognition and classification errors, negating the financial benefit of mobile information capture.

Touchless Processing

After information is captured by Kofax Web Capture, Kofax Transformation Modules™ advanced automation technology enables straight through "touchless" processing. KTM automatically adds document and form classification, page separation, challenging data extraction and validation capabilities to drive business process applications. By automating what were previously labor intensive, error prone and time consuming tasks, KTM can significantly reduce labor costs, improve information quality and accelerate business processes.

About Kofax

Kofax plc (LSE: KFX) is a leading provider of Capture Enabled BPM™ solutions. These award winning solutions capture and streamline the flow of business critical information throughout an organization in a more accurate, timely and cost effective manner, enabling our customers to be more responsive to their constituents and better grow their businesses. Kofax solutions provide a rapid return on investment to thousands of customers in banking, insurance, government, healthcare, business process outsourcing and other markets. Kofax delivers these solutions through its own sales and service organization, and a global network of more than 800 authorized partners in more than 70 countries throughout the Americas, EMEA and Asia Pacific.
